

## Pioneer POS CYPRUS Helps Take ‘Byte’ Out of POS Solution

**December 2015** – If you’re looking for a healthy, responsible choice for a meal in the New York tri-state area, look no further than your local [BareBurger](#). The folks at BareBurger pride themselves in supplying the community with organic and all-natural burgers, snacks and shakes. A main staple of their business is the careful sourcing of every one of their ingredients. They take care to make sure they are providing the best, most responsibly grown ingredients as close to the location as possible. If Wisconsin has the best cheese and Texas has the best elk, they’ll source from those locations. They believe in partnerships that make sense. Not surprisingly, BareBurger in Forest Hills, NY chose the best source for their newest POS systems, [Vitabyte Inc.](#) and [Pioneer POS](#).

Our friends over at [Vitabyte](#) provided and installed the solution with [Aldelo Restaurant software](#) and 5 of the latest [CYPRUS](#) terminal models. Vitabyte provides comprehensive restaurant and food service outlet POS, enterprise and consumer facing solutions that can be scaled to meet the needs of every type and size of restaurant, whether you operate a single restaurant or hundreds.

The [Pioneer POS CYPRUS](#) offers a stylish and powerful solution for today’s demanding applications and is durable enough to protect against liquid spills, perfect for an environment like BareBurger restaurants. It takes up little countertop space and can be easily mounted on the wall. Additional add-ons include credit card reader, magnetic stripe reader, webcam, and rear-facing display. BareBurger wanted a faster solution to meet their high-end needs, and the CYPRUS along with Aldelo software has allowed them to increase speed and serve more customers.

Aldelo Restaurant software allows BareBurger to handle point of sale, payment processing, inventory control, customer tracking, labor management, and many of the day-to-day activities that restaurant operators are faced with. This software integrates well with Pioneer POS terminals and empowers restauranteurs to increase efficiency and reduce complexity. These rich features have helped BareBurger to maximize productivity in their POS environment and realize ROI benefits that were not previously attainable using their previous system.

Overall, the system took about 8 hours to install with a 4 hour training session provided to employees. There was a very quick turnaround, and BareBurger was able to go live with the systems opening the next day realizing increased speeds checking customers out and saving on payroll. Sourcing from the best is important, and Pioneer POS is ready to provide the solution that best fits any POS need.
